

SMALL TEAM. BIG PLANS. GET STUCK IN.

A PRACTICAL GUIDE TO PUTTING CHATGPT TO WORK.

A BIT OF HELP WITH A VERY FULL PLATE.

A small team can have a very full plate. The numbers need checking, the launch needs writing and someone still has to send the follow-up. ChatGPT can lend a hand with that lot.

Inside are five everyday jobs, real examples and prompts you can make your own. Bring the work you already have. We will start there.

LESS SPINNING PLATES. MORE GETTING ON.

In a small business, the person planning the campaign might also be keeping an eye on the budget. Everyone gets stuck in. A useful tool should make that easier, without giving you another complicated thing to manage.

ChatGPT Business gives your team a place to work through questions, make sense of files and turn a rough starting point into something useful. This guide shows five places to begin. The original examples use GPT-5; the work itself will probably look familiar.

UNTANGLE THE KNOT.

Bring the question with all its moving parts. ChatGPT can break it into smaller steps, work through the details and explain how it reached an answer.

GIVE GUESSWORK LESS ROOM.

Ask for calculations, assumptions and sources. A clearer answer is easier to check, and easier to put to work when the decision is yours.

MAKE IT SOUND LIKE YOU.

A short email, a longer proposal or a launch that needs a proper introduction. Share an example of your voice and say who you are writing for.

BRING YOUR WORK WITH YOU.

Use files and connected tools to give the conversation some real context. The useful details are often in the documents your team already has. See page 9.

YOUR BUSINESS IS YOUR BUSINESS.

A dedicated Business workspace includes admin controls and single sign-on. Your business data is not used to train OpenAI models by default. Extra credits can extend usage when the team needs more room to work.

[BUSINESS PLAN DETAILS >](#)

THE NUMBERS HAVE A STORY.

A folder full of spreadsheets can hide a fairly simple question: where is the money going? Give ChatGPT the files and ask it to bring them together, tidy up the inconsistencies and show the patterns in a chart you can actually use.

GPT-5 runs Python behind the scenes to crunch numbers

Source data automatically cleaned, normalized, merged, and deduped

Executive summary

Q2 actual spend was \$1.32M vs planned \$1.12M — a ~17% overshoot driven mostly by Shipping and Tools.

Top cost drivers by category are *Shipping* and *Tools*, together representing ~44% of Q2 spend; by vendor, a handful of vendors each account for 4–8% of total spend (see tables below). Two quick opportunities stand out: (1) negotiate rates or change fulfillment strategy for Shipping (single biggest line), and (2) consolidate / rationalize overlapping SaaS Tools vendors. Visualisations comparing **Actual** vs **Planned** for top categories and top vendors are attached below.

THE ORIGINAL EXAMPLE / SPEND DATA, CHARTS AND A CLEAR SUMMARY

HAVE A GO.

Upload your latest financial spreadsheets. Then give it a clear question, like this:

Look through this spend data and explain what is driving our costs. Point out practical places we could spend less. Show the results in a bar chart and write a short summary for the team. Tell me which files and calculations you used.

KEEP THE FILES CLOSE.

TRY IN CHATGPT >

Connect Google Drive or OneDrive, where available, to bring the relevant files into the conversation. Ask which files it used, so you can check the work.

GOOD NEWS. YOUR OWN VOICE.

You have something worth telling people about. Now it needs an email, a landing page and a few social posts, all sounding like the same business. Give ChatGPT the launch details and a piece of writing that already feels like you. That is a useful start.

Refine with GPT-5's advanced writing abilities in Canvas

Summer Promo Campaign Kit

1. Announcement Email

Subject: Reduce IT Spend by 20% — Free Onboarding This Summer

Pre-header: 20% off managed IT packages + free onboarding — limited-time summer deal

Body: Hi [First Name],

This summer, SummitTech Solutions is making it easier for growing businesses to modernize and secure their IT—with exclusive savings you won't find any other time of year. For a limited time, get **20% off** our managed IT packages **plus free onboarding**. We'll also make this more playful, secure, productive, and ready for whatever your team needs.

Ready to transform your tech? Click below to book your free consultation and lock in your summer savings.

[Book now]

Best,

The SummitTech Team

2. Landing Page Copy

Headline: Unlock 20% IT Savings This Summer

Subhead: Upgrade your infrastructure now—free onboarding ends August 31.

Our managed IT support, around-the-clock monitoring, and dedicated vCIO guidance give growing businesses the confidence to move forward.

THE ORIGINAL EXAMPLE / A CAMPAIGN KIT, WITH ROOM TO REFINE IT

HAVE A GO.

Upload a past marketing piece and the details of your launch. Then try this:

Put together a campaign kit for [name of your launch], using our example copy as a guide to tone. Include an announcement email, landing page copy, a LinkedIn post, an Instagram post and a short brief for the sales team. Keep the message consistent across all five.

GIVE IT A PROPER FINISH.

TRY IN CHATGPT >

Refine the wording in Canvas. If your team uses Canva, carry the finished copy into a visual that looks like you. The dates, offers and final say are still yours.

KNOW WHAT WENT WHERE.

The plan said one thing. The spending says another. Before the month runs away with you, bring the budget and actuals into the same conversation. ChatGPT can line up the figures, flag the bigger gaps and help you work out which questions to ask next.

Normalizes inconsistent spreadsheet data & flags what matters, no data wrangling needed

GPT-5 shows its work and lets you know if it's unsure

		Department	Category	Budget
1	2	Customer Success	Salaries	126854
2	3	Customer Success	Software	68233
3	0	Customer Success	Contractors	109742
4	1	Customer Success	Misc	70916
5	6	Engineering	Misc	138236

Thought for 29s

I ran a consolidated **month-end variance analysis for March 2025** across the uploaded department files. You'll see two interactive tables in the workspace:

- **Month-end Summary by Department (March 2025):** total Budget, Actual, Variance \$ and Variance % per department.
- **Flagged Variances > 7% (Drivers by Category):** category-level drivers for any department where |Variance %| exceeds 7%.

I also saved a full Excel workbook with a Summary tab, per-department detail tabs, and a "Flagged Drivers" tab: [Download the Excel report](#). This file was created at the path shown in my run output. ↗

What I calculated (so you can audit quickly)

- **Variance formulas:**
 - $\text{Variance \$} = \text{Actual} - \text{Budget}$
 - $\text{Variance \%} = (\text{Actual} - \text{Budget}) / \text{Budget}$ (safe-handled when Budget = 0).
- **Flag threshold:** Any row with |Variance %| > 7% is included in the drivers table.
- **Attribution:** Drivers are shown at the **Category** level (e.g., line item / account). If the source column names varied, I auto-detected them and standardized to **Category**, **Budget**, and **Actual** before

THE ORIGINAL EXAMPLE / BUDGET, ACTUALS AND THE DIFFERENCES BETWEEN

HAVE A GO.

Upload the budget and actual-spend spreadsheets for your departments. Then ask:

Compare each department's budget with what we actually spent. Highlight the biggest differences and explain what is driving them. Show the calculations clearly, flag anything uncertain and give us a short list of the items worth looking into first.

LEAVE A USEFUL PAPER TRAIL.

TRY IN CHATGPT >

Keep the analysis in a Project so you can compare one month with the next. Connect the relevant Drive or OneDrive files, where available, and check the reporting dates.

HAVE THE MEETING. LEAVE WITH A PLAN.

A useful meeting starts before everyone sits down. Bring the notes, transcripts and half-finished thoughts. ChatGPT can turn that pile into an agenda, a short pre-read and a clear view of what needs deciding. Afterwards, give the follow-ups somewhere sensible to live.

Synthesized from messy call transcripts or copy-pasted Slack/Teams conversations

GPT-5 remembers these action items for future conversations

Pre-Read Kit

Meeting Topic: Q4 Revenue Growth Initiatives

Participants: Agency Leadership Team (Jordan Lee, Taylor Morgan, Casey Bennett, Riley Carter)

Objective: Decide which new initiatives to prioritize to hit Q4 targets with limited resources.

Impact vs Effort Matrix:

	Low Effort	High Effort
High Impact	A. Launch referral program Decision Needed B. Upsell to existing clients Discuss	C. Develop new online course Discuss Feasibility
Low Impact	D. Update website testimonials Decision Needed	E. Sponsor local event Defer

Key Decisions To Make

- Approve or reject launching a referral program for Q4
- Approve website testimonial updates
- Discuss whether to focus on upselling to current clients, and what support is needed
- Discuss feasibility and timing for launching a new online course (higher effort, high reward)
- Decide later about sponsoring a local event (not urgent/impactful)

Agenda

1. Welcome & Objectives (5 min)

THE ORIGINAL EXAMPLE / A PRE-READ, AN AGENDA AND DECISIONS TO MAKE

HAVE A GO.

Upload your meeting notes or transcripts and name the topic. Start with this:

Turn these notes into a one-hour meeting agenda for [topic]. Compare our options in an impact-versus-effort chart, mark the decisions we need to make and list the follow-ups. Include owners and dates where the notes give them; flag anything we still need to agree.

REMEMBER THE NEXT PERSON.

TRY IN CHATGPT >

Using ChatGPT record in the macOS app? Turn the meeting into a transcript, summary and action list. Let people know you are recording, then check the handover before sharing it.

FIND THE RIGHT FIT. ASK GOOD QUESTIONS.

Every supplier has a convincing website. You still need to know whether the tool will suit your team, your budget and the way you work. Ask ChatGPT to research the options and put the useful differences side by side, with sources you can follow.

Custom-fit analysis based on your team's size, needs, and workflows

Comparison of Accounting Software Options for Small CPG Businesses

Small consumer packaged goods (CPG) businesses face unique accounting challenges, from razor-thin margins to rapidly moving inventory and multi-channel sales ^{1 2}. Even minor bookkeeping missteps - like a missed expense or an inventory count error - can skew financial reports and hurt decision-making. The right accounting software can become a **game-changer** for such businesses, offering tools to track inventory costs, manage invoices across channels, and integrate seamlessly with e-commerce and supply chain systems. This report compares four **popular** accounting software options tailored for a small CPG company with limited staff. Each option is evaluated on **Key Features**, **Pricing**, **Integrations**, and **Pros & Cons**, focusing on practical needs and pain points of small CPG firms. A summary comparison table is provided below for a quick overview.

Software	Inventory Capabilities	Notable Integrations	Pricing (Monthly)	Ideal For
LedgerPro Cloud	Basic built-in inventory (real-time tracking, POS, COGS) ³	1,000+ apps (Shopify, Amazon, CRM, bank feeds) ⁴	Starter \$25; Standard \$50; Advanced \$80	Ease of use for most small CPG operations
InventoryMax Suite	Advanced inventory (multi-warehouse, BOM, lot costing) ⁵	Native modules (inventory & accounting unified); APIs for e-commerce	Pro \$120 (up to 500 SKUs); \$200+ for enterprise plans	Inventory-intensive brands (production, wholesale)
	Moderate inventory (sync	Direct Shopify, Amazon	Basic \$30 (1 channel)	Multi-channel sellers

THE ORIGINAL EXAMPLE / SUPPLIER RESEARCH AND A SIDE-BY-SIDE COMPARISON

HAVE A GO.

Choose Deep research in ChatGPT and describe the kind of business you run:

Research and compare the leading [tool/service] options for a small business in [your industry]. Include features, pricing, integrations, strengths and drawbacks. Consider our team size and how we work. Put the comparison in a table and link to the sources behind it.

KEEP THE SHORTLIST HANDY.

TRY IN CHATGPT >

Save the comparison in a Project. When prices, features or your own needs change, ask for an update. A shortlist is most useful when it still reflects the job you need done.

FIVE SMALL JOBS. START WITH ONE.

Pick something already on your list. Bring the relevant material, paste a prompt and see what gets easier.

01 MAKE YOUR WEBSITE SOUND HUMAN.

Paste your website copy, then ask:

"Rewrite this in a warmer, more conversational tone. Keep the facts intact and suggest one headline change that could encourage more people to sign up."

02 GIVE SALES A SENSIBLE NEXT STEP.

Bring your CRM data, or use a connected HubSpot account where available:

"Based on our deals and lead stages, which accounts look most likely to close in the next 30 days? Explain why, and suggest three actions our sales team should take now."

03 SEE HOW YOU COMPARE.

Share your product documents and the competitor's name:

"Compare our product with [Competitor] in a clear table. Use our internal documents and public web sources, link to the evidence and flag anything you cannot confirm."

04 GIVE YOUR CODE A ONCE-OVER.

Use the GitHub connection to bring in the repositories you want reviewed:

"Review our GitHub repositories for potential security risks. Explain what you find, rank the issues by importance and suggest practical fixes the team can review."

05 TURN THE NOTES INTO A PROPOSAL.

Paste your client meeting notes, then try:

"Turn these notes into a clear proposal email for the client. Explain the value of our offer and the next steps. Flag any scope, dates or costs we still need to agree."

ONE USEFUL JOB. THEN THE NEXT.

NO PERFECT PROMPT REQUIRED.

01 BRING THE RIGHT FILES.

If your workspace offers Google Drive, OneDrive or another relevant connection, use it to bring your working material into the conversation. Otherwise, upload the files you want ChatGPT to use. Say what matters and which version is current.

02 GIVE IT A PROPER BRIEF.

Tell it what you are trying to do, who the work is for and what a useful result looks like. A chart, a short email, a comparison table: say so. You do not need a perfect prompt to make a start.

03 CHECK IT. IMPROVE IT. KEEP IT.

Read the result with the same care you would give a colleague's first draft. Ask a follow-up, fix what needs fixing and save the useful bits. A small improvement you can use again is a very good day's work.

PICK A JOB. OPEN CHATGPT. GET STUCK IN.

[OPEN CHATGPT >](#)
